Summary

AI/ML engineer with strong Python/FastAPI and OpenAI/LLM experience, plus relevant CV/document analysis for SaaS. Missing key full-stack elements (Streamlit UI, Firebase auth/storage, PayPal billing, cloud deployment) expected of a founding engineer. Strong backend/AI fit if willing to quickly own front end, auth, billing, and prod ops.

Strengths / Matched Skills

- No strengths saved.

Weaknesses / Gaps

- No weaknesses saved.

Recommendations

- Build and deploy a small TalentMatch-style MVP: FastAPI backend + Streamlit UI with Firebase Auth/Storage and PayPal billing; deploy on AWS/GCP with CI/CD, logging, and monitoring.
- Enhance the resume analysis project to include robust PDF ingestion (PyPDF2/pdfminer, layout parsing), explicit prompt design/versioning, and evaluation/guardrails; showcase results and metrics.
- Update the CV to list databases used, auth patterns, deployment stack (Docker, cloud provider, CI/CD), and any 0-to-1 ownership; highlight shipping cadence, reliability improvements, and user impact.

Job Description

Founding Full-Stack AI SaaS Engineer We are building TalentMatch Pro, an AI-powered SaaS platform that helps job seekers compare their CVs against real job descriptions, identify gaps, and improve their application strategy. What you will do: - Build and scale a FastAPI + Streamlit product - Integrate Firebase authentication and storage - Ship AI-powered CV analysis with OpenAI - Own billing workflows with PayPal - Improve product reliability, UX, and deployment pipelines What we are looking for: - Strong Python backend fundamentals - Experience with APIs, auth, databases, and SaaS integrations - Product mindset and ability to ship independently - Familiarity with cloud deployment and developer tooling Nice to have: - Experience with AI products, prompt design, and PDF/document processing - Experience building MVPs from zero to first users
