## 1. 20260501\_cv2.pdf

|           |               |                                  |
|-----------|---------------|----------------------------------|
| Recruiter | Score: 50/100 | Date: 2026-06-30T04:30:28.013085 |
|-----------|---------------|----------------------------------|

### Summary

Recruiter ranking completed for 1 candidate(s). Top candidate: 20260501\_cv2.pdf.

### Strengths / Matched Skills

- No strengths saved.

### Weaknesses / Gaps

- No weaknesses saved.

### Recommendations

- Ship a FastAPI + Streamlit MVP to demonstrate end-to-end UX and independent product delivery.
- Add an OpenAI-powered CV-vs-JD gap analyzer that ingests PDFs with clear prompt strategy and evaluation.
- Integrate PayPal subscriptions into the SaaS project and update the CV to highlight 0-to-1 ownership and outcomes.

### Job Description

Founding Full-Stack AI SaaS Engineer We are building TalentMatch Pro, an AI-powered SaaS platform that helps job seekers compare their CVs against real job descriptions, identify gaps, and improve their application strategy. What you will do: - Build and scale a FastAPI + Streamlit product - Integrate Firebase authentication and storage - Ship AI-powered CV analysis with OpenAI - Own billing workflows with PayPal - Improve product reliability, UX, and deployment pipelines What we are looking for: - Strong Python backend fundamentals - Experience with APIs, auth, databases, and SaaS integrations - Product mindset and ability to ship independently - Familiarity with cloud deployment and developer tooling Nice to have: - Experience with AI products, prompt design, and PDF/document processing - Experience building MVPs from zero to first users

## 2. 20260501\_cv3.pdf

|          |               |                                  |
|----------|---------------|----------------------------------|
| Semantic | Score: 52/100 | Date: 2026-06-30T04:28:59.174896 |
|----------|---------------|----------------------------------|

### Summary

AI/ML engineer with strong Python/FastAPI and OpenAI/LLM experience, plus relevant CV/document analysis for SaaS. Missing key full-stack elements (Streamlit UI, Firebase auth/storage, PayPal billing, cloud deployment) expected of a founding engineer. Strong backend/AI fit if willing to quickly own front end, auth, billing, and prod ops.

### Strengths / Matched Skills

- No strengths saved.

### Weaknesses / Gaps

- No weaknesses saved.

### Recommendations

- Build and deploy a small TalentMatch-style MVP: FastAPI backend + Streamlit UI with Firebase Auth/Storage and PayPal billing; deploy on AWS/GCP with CI/CD, logging, and monitoring.

- Enhance the resume analysis project to include robust PDF ingestion (PyPDF2/pdfminer, layout parsing), explicit prompt design/versioning, and evaluation/guardrails; showcase results and metrics.
- Update the CV to list databases used, auth patterns, deployment stack (Docker, cloud provider, CI/CD), and any 0-to-1 ownership; highlight shipping cadence, reliability improvements, and user impact.

### Job Description

Founding Full-Stack AI SaaS Engineer We are building TalentMatch Pro, an AI-powered SaaS platform that helps job seekers compare their CVs against real job descriptions, identify gaps, and improve their application strategy. What you will do: - Build and scale a FastAPI + Streamlit product - Integrate Firebase authentication and storage - Ship AI-powered CV analysis with OpenAI - Own billing workflows with PayPal - Improve product reliability, UX, and deployment pipelines What we are looking for: - Strong Python backend fundamentals - Experience with APIs, auth, databases, and SaaS integrations - Product mindset and ability to ship independently - Familiarity with cloud deployment and developer tooling Nice to have: - Experience with AI products, prompt design, and PDF/document processing - Experience building MVPs from zero to first users

## 3. 20260501\_cv1.pdf

CV Rewrite

Score: 100/100

Date: 2026-06-30T04:27:47.801031

### Summary

CV Rewrite completed successfully.

### Strengths / Matched Skills

- No strengths saved.

### Weaknesses / Gaps

- No weaknesses saved.

### Recommendations

- Review the rewritten CV before sending it to employers.
- Keep all claims accurate and truthful.
- Tailor the final version to the exact job description.

### Job Description

Founding Full-Stack AI SaaS Engineer What you will do: - Build and scale a FastAPI + Streamlit product - Integrate Firebase authentication and storage - Ship AI-powered CV analysis with OpenAI - Own billing workflows with PayPal - Improve product reliability, UX, and deployment pipelines What we are looking for: - Strong Python backend fundamentals - Experience with APIs, auth, databases, and SaaS integrations - Product mindset and ability to ship independently - Familiarity with cloud deployment and developer tooling

## 4. 20260501\_cv3.pdf

ATS Checker

Score: 33/100

Date: 2026-06-30T04:26:10.847112

### Summary

ATS keyword check completed. Coverage: 33%. Verdict: ATS Weak.

### Strengths / Matched Skills

- python
- fastapi
- api
- apis
- docker
- openai
- saas
- backend
- applications
- ai-powered

### Weaknesses / Gaps

- sql
- postgresql
- firebase

- frontend
- streamlit
- authentication
- storage
- deployment
- cloud
- render
- ats
- paypal
- rest
- developer
- join
- engineering
- help
- scalable
- web
- services

Recommendations

- Add missing high-value keywords where truthful: sql, postgresql, firebase, frontend, streamlit, authentication, storage, deployment.
- Mirror important job-description terms naturally in your CV summary and experience bullets.
- Use exact tool names where relevant, for example FastAPI, Docker, SQL, Firebase, OpenAI.

Job Description

Python Backend Developer (FastAPI) We are looking for a Python Backend Developer to join our engineering team and help build scalable web applications and AI-powered services. Responsibilities Design, develop and maintain REST APIs using FastAPI. Build scalable backend services with Python. Integrate PostgreSQL databases and optimize SQL queries. Work with Firebase Authentication and Firebase Storage. Integrate third-party APIs including OpenAI and PayPal. Collaborate with frontend developers using Streamlit. Write clean, maintainable and well-tested code. Participate in code reviews and improve application performance. Deploy and maintain applications on Render. Troubleshoot production issues and monitor application health. Requirements 2+ years of Python development experience. Strong knowledge of FastAPI. Experience with PostgreSQL. Experience with REST API development. Experience with Git and GitHub. Experience with Docker. Knowledge of authentication and authorization. Familiarity with cloud deployment. Understanding of software architecture and clean code principles. Good English communication skills. Nice to Have Experience with OpenAI APIs. Experience with Firebase. Experience with Streamlit. Experience with PayPal subscriptions. Knowledge of ATS optimization. Experience with AI or LLM applications. Benefits Remote work. Flexible working hours. Competitive salary. Professional development. Modern AI technology stack. Opportunity to work on innovative SaaS products.

5. 20260501\_cv2.pdf

|             |               |                                  |
|-------------|---------------|----------------------------------|
| CV Analysis | Score: 74/100 | Date: 2026-06-30T04:24:54.080926 |
|-------------|---------------|----------------------------------|

Summary

Solid core match on Python/FastAPI, PostgreSQL, REST, Docker, and Firebase; gaps in Git/GitHub, testing, Render deployment, monitoring, and Nice-to-Haves (OpenAI, PayPal, Streamlit).

Strengths / Matched Skills

- Practical FastAPI API development experience
- PostgreSQL and query optimization
- Firebase Authentication and Storage integration
- Dockerized workflows and deployment pipelines
- Experience building SaaS backend and auth/billing flows
- Emphasis on clean architecture and performance

Weaknesses / Gaps

- No explicit mention of Git/GitHub usage
- Testing practices (unit/integration, pytest) not stated
- No Render or specific cloud deployment details
- No monitoring/observability or production troubleshooting noted
- No stated experience with OpenAI, PayPal, or Streamlit
- Years of experience not specified
- Collaboration/code reviews not mentioned

## Recommendations

- List Git/GitHub explicitly and link to representative repos.
- State total years of Python experience and team size/scope of projects.
- Add testing details (pytest, coverage, CI) and examples of testable design.
- Document deployments (Render preferred; otherwise AWS/Heroku) and include infra steps.
- Include monitoring/alerting experience (Sentry, Prometheus/Grafana, logs) and incident handling.
- Clarify auth expertise (OAuth2, JWT, role-based access) and security hardening.
- Build a small demo integrating OpenAI and PayPal subscriptions; optionally pair with a Streamlit UI.
- Quantify performance wins (e.g., SQL optimizations, response-time reductions) and add metrics.
